For Immediate Release

DataSalon announces major journal reporting upgrade for PaperStack.

Exciting new journal-centric reports have been added to DataSalon's PaperStack service.

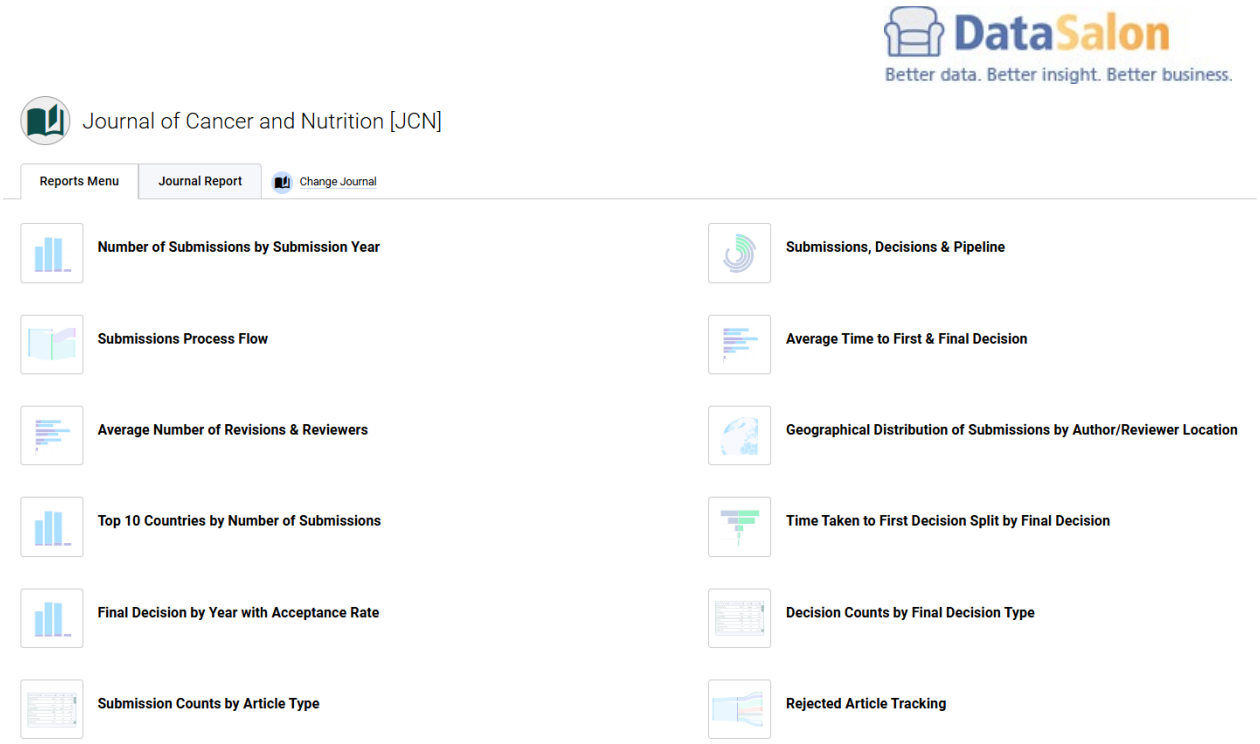

Oxford, UK, 26 October 2026—DataSalon announced today the addition to PaperStack's editorial reporting suite of two new reports focusing on journal insights.

PaperStack already allows easy reporting across all the journals in a publisher's portfolio, by collecting and linking data from editorial submissions systems. The first of the new reports takes this a step further by ranking those journals according to key metrics. There are 11 different metrics available, including acceptance rate, days to first or final decision, and mean number of revisions.

The view can be switched between the top 10 journals, the bottom 10 journals, or all journals, as appropriate for the particular metric or use case under consideration. And, like all PaperStack reports, it can be filtered by a range of options (such as subject or article type) and is fully interactive, allowing the user to click through to the articles themselves to see the story behind the headline figures. This functionality gives the report a plethora of applications, from assessing a journal's performance within its field, to planning workloads and allocating resources.

The second report draws together all the metrics for an individual journal. This acts as a dashboard for the journal and supports an assessment of its performance, for example its submission patterns, the efficiency of its peer review process, and the geographical diversity of its authors and reviewers.

Nick Andrews, Managing Director of DataSalon, commented: "*These reports are the latest stage in our roadmap of enhancements to PaperStack, and add an invaluable extra dimension to the reports and article/person/organisation hierarchy already available in the service.*"

About DataSalon

DataSalon are the experts in customer insight for publishers. We pride ourselves on excellent service, and our cloud-based services are fast, flexible, and backed by first-class support. Many of the world's biggest scholarly publishers rely on DataSalon to help drive new sales, inform future strategy, and provide accurate insight to the whole organization.
